

Bellows Valve

Applicable Standards:

DESIGN AND MANUFACTURE ON THE BASIS OF API 600、ASME B16.34

CONNECTION SIZE ON THE BASIS OF ASME B16.5、EN 1092

STRUCTURAL DIMENSION ON THE BASIS OF ASME B16.10、EN 588-1、DIN 3202

TEST AND INSPECTION ON THE BASIS OF ISO 5208、API 598、EN 12266

No	Part Name	No	Part Name
1	Body	9	Gland Flange
2	Seat	10	Yoke
3	Disc	11	Stem Nut
4	Stem	12	Handwheel
5	Bellows	13	Locknut
6	Bonnet	14	Bolt
7	Packings	15	Nut
8	Gland	16	Gasket

Product Features:

Bellows globe valve adopts sealed structure. In common valves, the packing seal of the stem ages fast and it is easy to leak, but this design totally eliminates these shortcomings. Apart from increasing the efficiency of materials and the safety of production equipment, it not only reduces maintenance costs and frequent maintenance of products but also provides a clean and safe working environment.

Double seal design (bellows and packings), if the bellows invalidates, the stem packings will prevent outside leaking. There are no fluid loss, but it reduces the energy loss and improves the equipment safety.

Longer service life, less maintenance and lower operating costs.

Firm and durable seal design of bellows ensures the zero leakage of stem and provides more reliable performance and no maintenance. Quenched stem and surface nitridation with good performance of corrosion and friction resistance.

Excellent performance, graceful outline, and more visibility with position indicating of stem.
